# Front End ReactJS Code Test

KENO

Your task is to create a simple Keno Lottery page.

TASKS:
1. Create a new project using create-react-app
2. Create a grid up to 80 numbers
3. The user should be able to select 5 numbers.
4. Add a stake input field and a place bet button.
5. When pressing place bet, it should be validating the number of selections and the stake, if it's valid display a success message to the user and clear out the selections.
6. Add stake buttons next to the stake input with the most popular stakes to improve the UX.
7. Add a Lucky Pick button with the functionality to select 5 random numbers.

Extra Points:

8. Use a state management library like Redux or Mobx
9. Use react-jss for styling
10. Make the site responsive

When you finished please send us the zipped project.
